

## The New Cinénova IR16 Multi-zone Amplifier

The second generation multi-zone amplifier produced by Earthquake Sound, the Cinénova IR16 has the power no other multi-zone amplifier in the market can equal. Designed with 8 individual power supplies (bifilar) for power isolation, accuracy and better channel separation, this rack-mountable amplifier can deliver up to 150 Watts RMS, a power rating that is almost unheard of for multi-zone amplifiers.

The bridgeable output design enables the Cinénova IR16 to accommodate 4-Ohm and 8-Ohm speakers. Moreover, the LOCAL/BUS input audio selector on each of the eight zones allows it to amplify either a single source or up to 8 different inputs/sources. The Cinénova IR16 amplifier includes eight sets of external gain keypads and remote controls with IR capability for great flexibility and user-friendly adjustments.

Whether you seek more power or more options, the Cinénova IR16 will give you more than you can ever expect from a multi-zone amplifier.

### Special Features

- Bridgeable output
- Zone IR control with individual zone digital pad
- Décora friendly keypads
- Four (4) built-in IR repeaters
- Rear gain control to limit the output gain of the zone pads
- LOCAL/BUS input audio selector for each zone
- 12V DC trigger
- Individually driven amplifier blocks
- Individual power supplies (bifilar)
